These centres were asked to enrol blocks of 40 consecutive patients. Coronary artery disease, also called coronary heart disease, occurs when the inner walls of the coronary arteries have a buildup of cholesterol and fatty deposits called plaques. CAD can lead to a heart attack myocardial infarction or MI.

It can lead to angina or chest pain, which can indicate a heart attack. Although Like every other organ or tissue in the body, the heart muscle needs oxygen-rich blood from the coronary arteries to survive. However, a significantly reduced 1 year mortality between the three treatment groups was observed only in patients with stable angina, reflecting the large proportion of low-risk patients undergoing PCI.
