Organisation of an ecosystem - Edexcel - Revision 1 - GCSE Biology (Single Science) - BBC Bitesize

A predator is an organism that eats another organism. The prey is the organism which the predator eats. Some examples of predator and prey are lion and zebra .

Dynamics of Predation | Learn Science at Scitable

Predation is a biological interaction where one organism, the predator, kills and eats another organism, its prey. It is one of a family of common feeding.

Species interactions: prey-predator!

First of all, let's assume that predators and prey walk randomly through their common environment, bumping into each other randomly. Every time the predator.

Evolution in Species May Reverse Predator-Prey Population Cycles

Predator-prey relationships have been likened to an evolutionary arms race— the prey become more difficult to capture and eat, while the predators perfect their.

Predator-prey cycles (video) | Ecology | Khan Academy

It should come as no surprise that predators influence the numbers of their prey. What may require a bit more reflection is that prey, in turn, affect the number of.
